

## Presentation solution adjusted for you!

**Not all presenters are the same.**

**That's why we invented TechPod Presenter!**

Sporting a sleek, modern design, TechPod Presenter is a sophisticated, fully ADA compliant, compact lectern with multimedia capabilities built-in for smooth presentations.

TechPod Presenter comes equipped with electronically controlled hydraulic lift for height adjustment.

A single button to press for an up / down motion, adjusting the lectern height according to physical requirements of every lecturer.

TechPod Presenter Interactive Screen offers the speaker the ability to annotate directly on the screen and save those notes for session attendees.

This allows everyone from trainers at army bases and city planners to physicians to clearly annotate their material for the audience without stepping away from their TechPod Presenter lectern.

The supplied, easy to use, annotation software enables the presenter to annotate over any image, website, presentations or any other file through the computer and even live PC movies and DVD files! It may even be used instead of a writing board in the hall.

Interfacing easily with any projector or projection system, its compact design easily accommodates conference centers, lecture halls and boardrooms.

It's so easy to install TechPod Presenter, just plug in for a seamless multimedia presentation.

### TechPod Presenter Features:

- Stylish lectern with electronically controlled hydraulic lift for height adjustment
